simple to use...

Place Aqua-Sac in water...

Submerge for 5-6 minutes...

Use inflated sac to hold back water and divert water flow

In England and Wales over 2 million commercial and residential properties are located in flood risk areas.

In times of flooding it is essential that properties like these are prepared and have adequate protection to hand. A ground-breaking new product has now been developed to not only protect homes and buildings but also act as the first response in times of flooding.

A sturdy jute sack containing a water absorbent material – a revolutionary alternative to traditional sand bags. It can be transported in a standard family vehicle, can be stored for up to 5 years in a garage or warehouse and is quick to set up.

So whether you need to protect your home or business, keep Aqua-Sac to hand for the first response.

benefits...

- Light and easy to carry and transport
- Inflated bag only weighs 13-14kg
- Deployed in minutes to protect your business or home
- Unique patented feature stabilises the Aqua-Sac when stacked
- 54cm x 31cm
- Can also be used to soak up seepage
- Environmentally friendly
- Cleaner and tidier for use indoors
- 20 times less storage space required
- Biodegradable
- Shelf life in excess of 5 years

Pack of 25
Code: 1030030876

Aqua-Sac vs. Conventional Sandbag

AQUA-SAC®	Conventional Sandbag
Lightweight – in its uninflated state weighs less than a bag of sugar	Heavy – bags weigh 30kg each
Easy to transport – low weight and volume – highly portable	Transportation requires large vehicle and manpower
Shelf life in excess of 5 years	Shelf life of only 1 year
Biodegradable	Polypropylene bags are non-biodegradable
20 times less storage space required	Requires large storage space
